

## **Standing Committee on Patents Study**

### **Inventor Remuneration**

This study concerns the issue of remuneration for employee inventors for inventions made in the course of their employment. Specifically, this study will consider whether and to what degree employee inventors should be compensated in addition to their normal wages for such inventions.

In some countries, employer rights to employee inventions are regulated by national laws, whereby an employer can acquire the right to an invention made by an employee in a number of ways. In other countries, there is no such regulation. Some countries have various requirements relating to the amount of remuneration an employee must receive for an invention made by the employee and filed in a patent application by the employer. Some countries have no such requirements. This creates a complex compliance obligation for international organizations.

The issue becomes even more complex in the context of multinational inventions, i.e. where joint inventors of an invention reside in different countries. This is an increasingly common situation due to the prevalence of international corporations having geographically distributed R&D groups, multinational joint venture projects, international corporate/university collaborations, and other cross-border research projects.

This study is not being presented for a resolution at the Sydney Congress. However, it will be the subject of a plenary session to debate a possible form of draft position that may then be used to invite comments from GOs and other stakeholders. After consideration of all input, the Standing Committee intends to propose a resolution on inventor remuneration for adoption at the Cancun Congress in 2018.
